

AMENDMENT TO THE CLAIMS

(original)

1. A method of signal transmission comprising the steps of:  
    splitting a signal  $s_1$  into signals  $s_1(a)$  and  $s_1(b)$ , wherein the signal  $s_1$  is split unevenly such that the signal  $s_1(a)$  has an associated power level greater than a power level associated with the signal  $s_1(b)$ ; and  
    phase sweeping the signal  $s_1(b)$  using a phase sweep frequency signal to produce a phase swept signal  $s_1(b)$ .

(original)

2. The method of claim 1 comprising the additional steps of:  
    amplifying the signal  $s_1(a)$  to produce an amplified signal  $s_1(a)$ ; and  
    amplifying the phase swept signal  $s_1(b)$  to produce an amplified phase swept signal  $s_1(b)$ .

(original)

3. The method of claim 2, wherein power levels associated with the amplified signal  $s_1(a)$  and the amplified phase swept signal  $s_1(b)$  are approximately equal.

(original)

4. The method of claim 2, wherein the signal  $s_1(a)$  and phase swept signal  $s_1(b)$  are amplified an equal amount.

(original)

5. The method of claim 2, wherein the signal  $s_1(a)$  is amplified an amount greater than an amount phase swept signal  $s_1(b)$  is amplified.

(currently amended)

6. A method of signal transmission comprising the steps of:

splitting a signal  $s_1$  into signals  $s_1(a)$  and  $s_1(b)$ , wherein the signal  $s_1$  is split unevenly such that the signal  $s_1(a)$  has an associated power level greater than a power level associated with the signal  $s_1(b)$ ; and

phase sweeping the signal  $s_1(a)$  using a phase sweep frequency signal to produce a phase swept signal  ~~$s_1(b)$~~   $s_1(a)$ .

(original)

7. The method of claim 6 comprising the additional steps of:
- amplifying the signal  $s_1(b)$  to produce an amplified signal  $s_1(b)$ ; and
  - amplifying the phase swept signal  $s_1(a)$  to produce an amplified phase swept signal  $s_1(a)$ .

(original)

8. The method of claim 7, wherein power levels associated with the amplified signal  $s_1(b)$  and the amplified phase swept signal  $s_1(a)$  are approximately equal.

(original)

9. The method of claim 7, wherein the signal  $s_1(b)$  and phase swept signal  $s_1(a)$  are amplified an equal amount.

(original)

10. The method of claim 7, wherein the signal  $s_1(b)$  is amplified an amount greater than an amount phase swept signal  $s_1(a)$  is amplified.

(original)

11. A base station comprising:
- a splitter for splitting a signal  $s_1$  into signals  $s_1(a)$  and  $s_1(b)$ , wherein the signal  $s_1$  is split unevenly such that the signal  $s_1(a)$  has an associated power level greater than a power level associated with the signal  $s_1(b)$ ; and

a multiplier for phase sweeping the signal  $s_1(b)$  using a phase sweep frequency signal to produce a phase swept signal  $s_1(b)$ .

(original)

12. The base station of claim 11 further comprising:

a first amplifier for amplifying the signal  $s_1(a)$  to produce an amplified signal  $s_1(a)$ ; and

a second amplifier for amplifying the phase swept signal  $s_1(b)$  to produce an amplified phase swept signal  $s_1(b)$ .

(original)

13. The base station of claim 12, wherein power levels associated with the amplified signal  $s_1(a)$  and the amplified phase swept signal  $s_1(b)$  are approximately equal.

(original)

14. The base station of claim 12, wherein the signal  $s_1(a)$  and phase swept signal  $s_1(b)$  are amplified an equal amount.

(original)

15. The base station of claim 12, wherein the signal  $s_1(a)$  is amplified an amount greater than an amount phase swept signal  $s_1(b)$  is amplified.

(original)

16. A base station comprising:

a splitter for splitting a signal  $s_1$  into signals  $s_1(a)$  and  $s_1(b)$ , wherein the signal  $s_1$  is split unevenly such that the signal  $s_1(a)$  has an associated power level greater than a power level associated with the signal  $s_1(b)$ ; and

a multiplier for phase sweeping the signal  $s_1(a)$  using a phase sweep frequency signal to produce a phase swept signal  $s_1(b)$ .

(original)

17. The base station of claim 16 comprising the additional steps of:
- a first amplifier for amplifying the signal  $s_1(b)$  to produce an amplified signal  $s_1(b)$ ; and
  - a second amplifier for amplifying the phase swept signal  $s_1(a)$  to produce an amplified phase swept signal  $s_1(a)$ .

(original)

18. The base station of claim 17, wherein power levels associated with the amplified signal  $s_1(b)$  and the amplified phase swept signal  $s_1(a)$  are approximately equal.

(original)

19. The base station of claim 17, wherein the signal  $s_1(b)$  and phase swept signal  $s_1(a)$  are amplified an equal amount.

(original)

20. The base station of claim 17, wherein the signal  $s_1(b)$  is amplified an amount greater than an amount phase swept signal  $s_1(a)$  is amplified.
